

The Crittenden Press.

VOLUME 25.

MARION, CRITTENDEN COUNTY, KENTUCKY, APRIL 28, 1904.

NUMBER 48

Majestic Maleable Iron and Steel Range Cooking Exhibit.

DON'T FORGET OUR
Cooking Exhibit
GOING ON
ALL NEXT WEEK.

COME IN ANY DAY NEXT WEEK AND HAVE A CUP OF
COFFEE AND HOT BISCUITS.

FREE!
DURING WEEK OF EXHIBIT

we will give one set of Majestic Ware **FREE** to any one buying a Majestic Range. We make the broad statement that this set of Ware is the finest ever offered for sale—Not a piece of tin in the entire set—We have the ware at our store. If you will call and see it you will agree with us that it cannot be duplicated anywhere for less than \$8.00. Come and have a cup of Coffee and Biscuits with us.

INVITATION

We extend you a cordial invitation to partake with us a cup of coffee and hot biscuits and to witness the working of - - -

The Great Majestic Maleable Iron and Steel Range

AT OUR STORE.

We will show you how to bake biscuits brown top and bottom in three minutes; how to cook with half the fuel you are now using, and show you an article that, if properly used, will last a lifetime. Exhibit 9 a. m. to 4 p. m.

COCHRAN & PICKENS, Marion, Kentucky.

GOLD FOUND IN THIS DISTRICT.

More New Machinery Coming In.—All the Mines Preparing For Business.

THIS TO BE A BANNER YEAR.

The Tabb is cleaning up and preparing to resume work in the near future.

The Asbridge is slicing washing gravel spar, and getting ready to resume mining operations.

The Wheatcroft uses a whim and is getting out a small quantity of about 50 per cent gravel dirt.

There is not much doing at the Yandell. They are cleaning up and getting ready for the summer run.

The Lucile mine has almost been unwatered and after an idleness of a month is expected to be able to resume mining operations this week.

A special to the Courier-Journal from Sturgis dated April 19, states that L. P. Gilchrist, of Sullivan, has received certificate of assay from Sonora, Cal., showing that he has discovered on his farm near Sturgis iron pyrites, carrying to the ton gold to the value of \$1.36.

H. A. Haynes returned Sunday from Birmingham, Ala., and other southern manufacturing cities, whither he went in the interest of the Ky. Fluor Spar company.

The Klondike mine has almost been unwatered, and underground conditions being favorable on observation to immediate resumption of mining operations, work of taking out spar from this mine will commence on a large scale at once, so Mr Reed states.

Both the Kentucky Fluor Spar and Marion Mineral companies have large quantities of spar on their yards at Mexico. This village is the natural shipping point for a large scope of the district and bids fair to become a dangerous rival to some of her near-by competitors.

Our Levis correspondent says: M. F. McGraw, of Ohio, was here last week looking over our mineral field. He seemed well pleased and we hope he will succeed in making some investments. Those having mineral lands should be reasonable in their terms, and thus give investors a chance to develop our section.

The Hopkinsville company have begun work on the E. B. Franklin place. They have encouraging prospects and are paying a handsome bonus to Mr. Franklin.

The Hopewell Mining Co., are putting in machinery at their mines on the Carter place. They have a very fine showing there.

Our Carrsville correspondent says: Interest in mining has by no means died out in this vicinity. The Schoolfield-Spees mines have put in an engine and will do some deep work. The shaft is already sixty feet deep; modern mining facilities are on the ground and from all indications they mean business. The pumping has been going on night and day.

W. S. Lowery, who leaves the Crittenden-Livingston field to embark in mining in Christian county, is one of the leading mineral men of this section, and has done much to develop the local field. We wish him all the success he deserves, in his new field and feel sure he will attain it as he is a conscientious and hard worker, and this always counts in any enterprise or undertaking in this life.

T. P. Gilchrist, Sullivan, Ky., has sent to our office a sample of the gold quartz which he has had assayed by two chemists in California and both agreed as to assay. The crude ore as taken out of the ground assayed \$3.60 per ton, and a selected quantity assayed \$53.00 per ton. Mr Gilchrist lives about one mile from the limits of Crittenden county and about the same distance from Sullivan, Ky., which is his postoffice.

He has also found the old Bell coal vein on his farm and has arranged with capitalists to have it worked. Mr Gilchrist is a good man and we hope all these good things coming his way may develop into paying properties.

Our New Salem correspondent writes: The mining interests promise to be on a larger scale this summer than ever before. The erection of the big mill of the Eagle company on their Cullen property will be one of the largest plants anywhere in Southwestern Kentucky. From the amount of building material passing down the road it surely will be one of the largest houses ever erected for mining purposes anywhere.

A rich vein of lead and spar has been struck on Tom Speas' land near Carrsville. The Scholfield & Speas Mining company of Dayton, Ohio, have been prospecting in the Carrsville country, and especially on the land of Tom Speas for quite a while, and have at last succeeded in striking a rich find. The Carrsville country is rich in minerals, and only needs development to make it one of the best mining sections of Western Kentucky.—Banner.

The Marion Mineral company received at this depot Tuesday a new pump, which Mr. Crider immediately had hauled out to be installed at the "Pogue mine" near Frances. Those interested will remember that the Prenon pump in service at this mine did not give satisfaction; but we think this new pump will give them pre-eminent satisfaction. It is of the "Bulldozer Pumping Jack" lift pattern.

Last Saturday a PRESS reporter visited the Pogue mine and while

there went down the shaft as far as the 100-foot level. He found spar all about him down there and the men at work on a 30-foot breast of it. This is the Tabb vein; it seems practically without limit. The Pogue mine is equipped with all the latest improved machinery, including blower for purifying the air. They are now averaging over 30 tons daily output of 98 per cent pure gravel spar, and have fully 2,000 tons on the dump. The company has just installed a new 6-inch pump and will put on a night shift and resume sinking at once. Everything about this mine runs smooth as clockwork. George Russell has charge of the machinery and Arch Oliver is mine boss; both are safe men. The Marion Mineral company have a fine property in the Pogue.

"CONTRIBUTION TO ECONOMIC GEOLOGY, 1904."

"Bulletin 225" has just been issued by the U. S. Geological Survey. This volume will prove of special interest to mine operators of this district, inasmuch as it contains an elaborate exposition of the fluor spar deposits of southern Illinois, and also a paper on the lead and zinc deposits of Illinois, both by H. F. Bains.

What is applicable in Illinois is more or less correlative of the conditions in Kentucky. As the mineral deposits may be conceded to lie in the same horizon, and to have been laid down at about the same geologic period. Copies can be had through our Representative in Congress.

There has been found within five miles of Stanford, Ky., what has been pronounced by marble dealers in four cities as fine black marble as ever came out of the earth. Several pieces of it has been "dressed" and shows up beautifully. A stock company with \$50,000 capital is being organized and everything necessary to have the product on the market within the next ninety days is being done. This marble was discovered through the class in geology of the Stanford Graded school. It is near the entrance to an immense cavern and runs through two hills adjoining. Those who have been on the ground say that there are many million dollars worth of the marble encased in the earth thereabout. The same two men who, from the graded school geological specimen located this rich marble mine, have everything ready to show where a rich lead mine near is located, and only are held in check from doing so by the fact that one man on a farm adjoining it refused to either for love or money lease his land. The road is wide open, however, for the marble fields now, and there is every indication that Lincoln will be considered within the next twelve months one of the most progressive and prosperous counties in Kentucky.

At Mt. Carmel, Fleming county, Miss Mary Cain, aged eighteen, was standing near an open fire, when her clothing became ignited, horribly burning her. She is thought to be dying.
